When you use the Smarthub rechargeable battery or AA rechargeable batteries, you may need to balance between the right and the left.

Insert an axle into black parts as shown in the left picture, and check whether it is well-balanced. A slight lean is not a big problem.

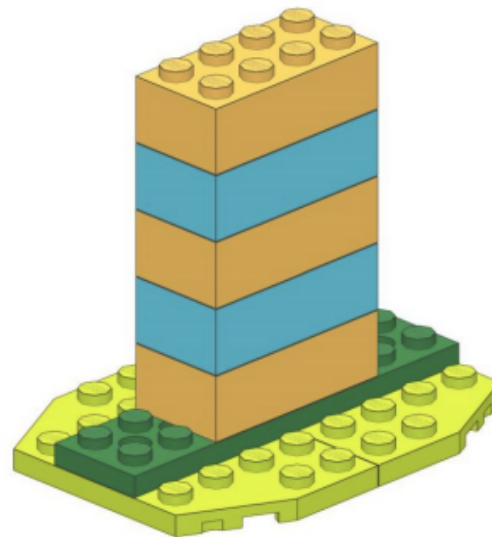

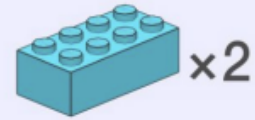

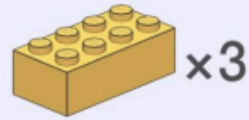

When the model is largely inclined to either side, adjust the position of the black parts, the blue part and the black axle as illustrated below.

Since the wind power of the fan is not very strong, put this model in as flat a surface as possible and set it in motion.
